

Your documents. Your next step. One workspace.

A visual handbook for employees, project owners, reviewers and read-only visitors.

Two connected spaces

Project documents
Required files, named responsibilities, versions and reviews.

Research library
Shared knowledge, classifications, references and endorsements.

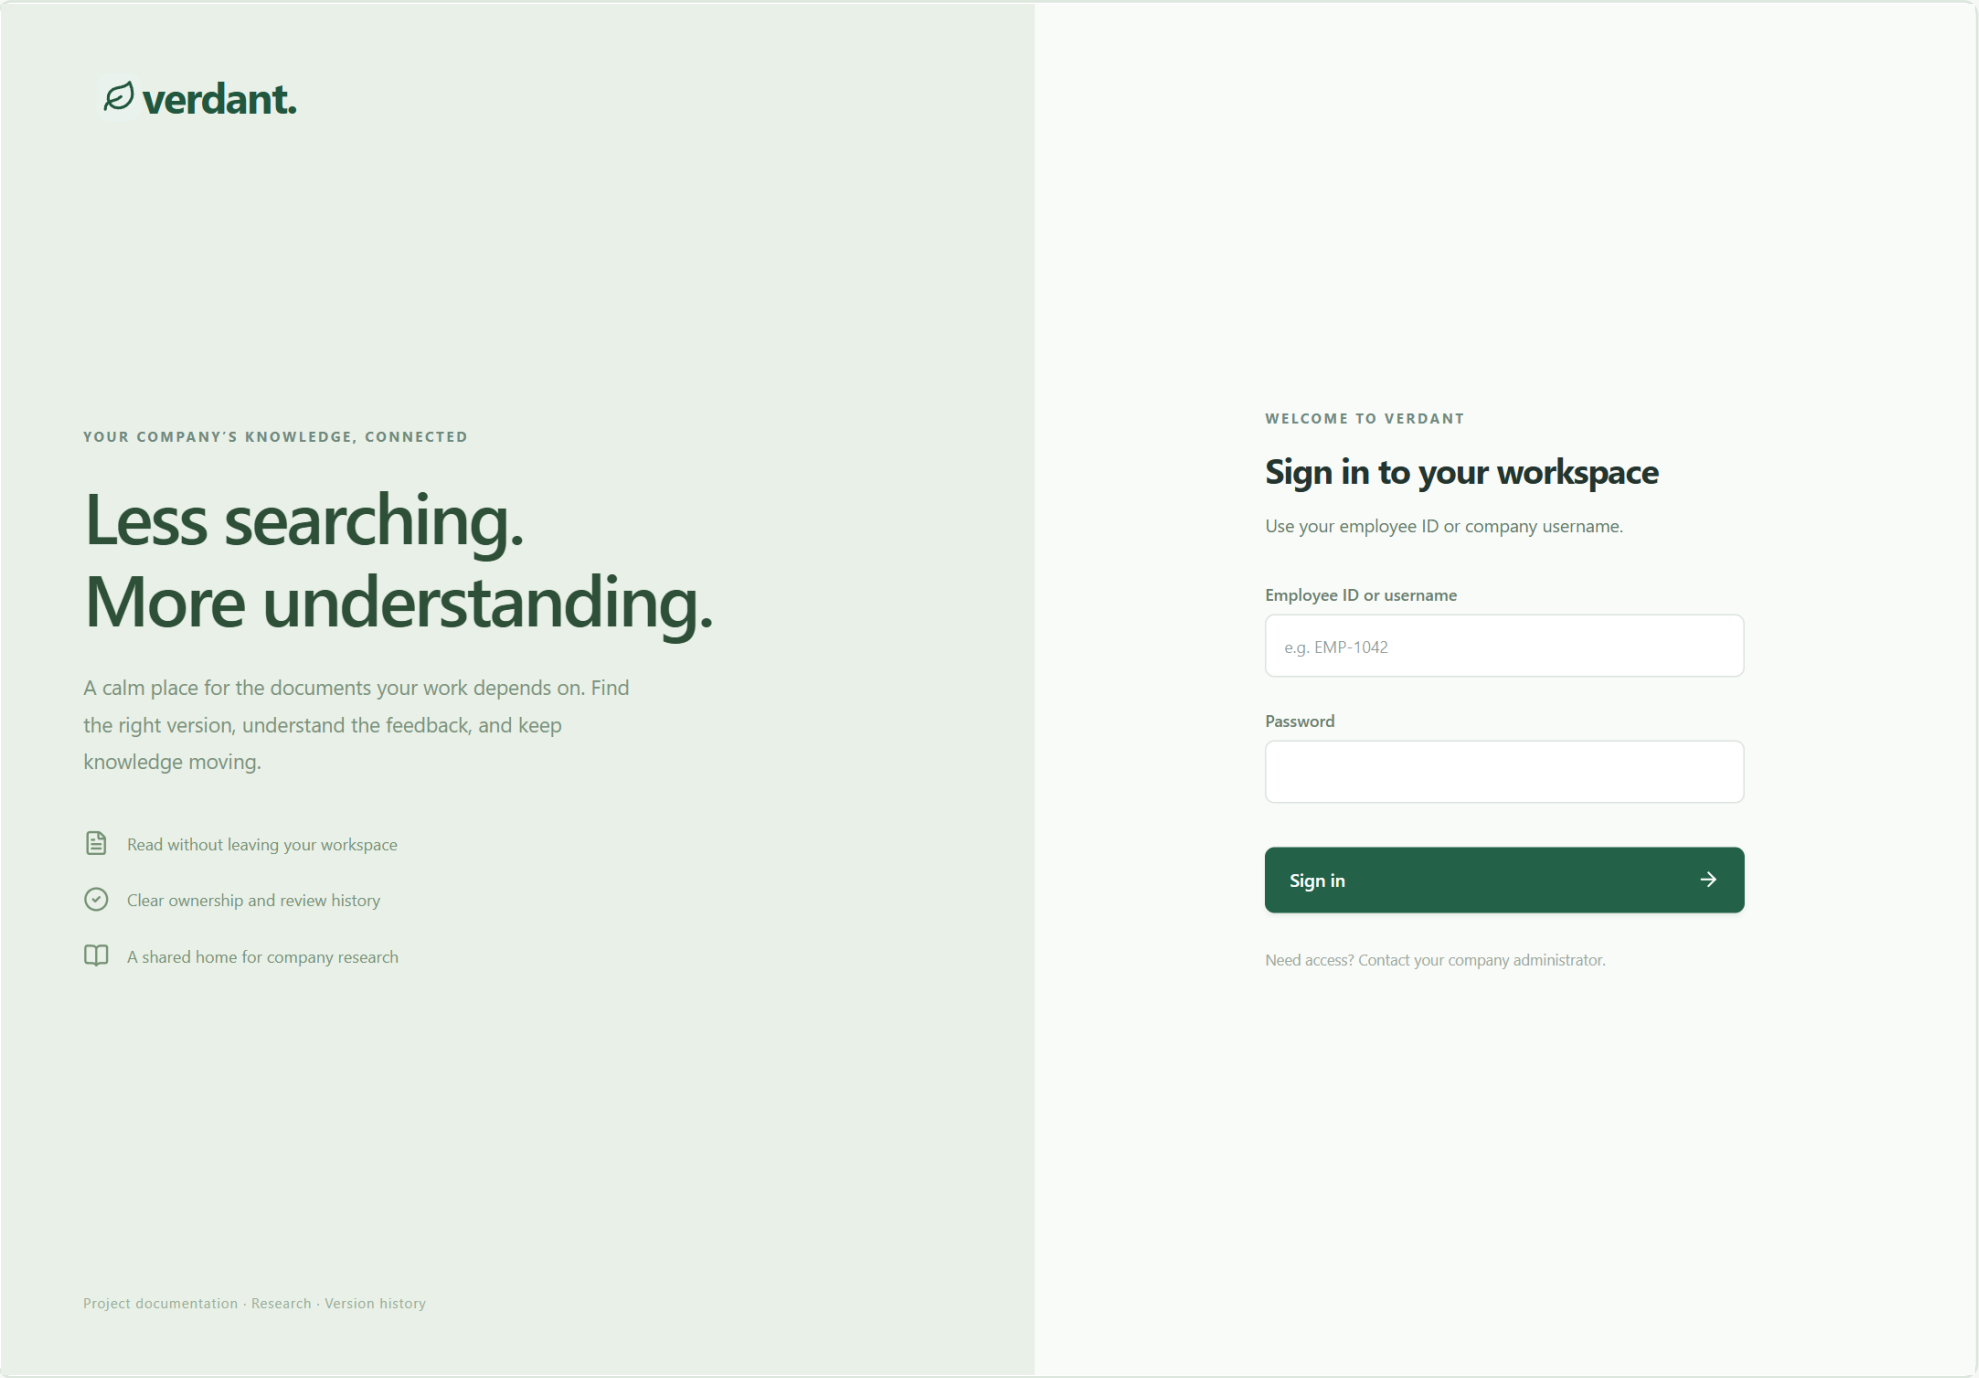

Find the page you need

Sign in, Home, My actions and projects	02-05
People and required documents	06-07
Read, upload, review and compare	08-11
Research and project references	12-14
Sharing, search, activity and Office files	15-18
Demo walkthrough and local setup	19-20

How to use this guide: follow the numbered instructions beside each actual application screen. Some examples show an unsaved form. Sample engineering values are invented and must not be used for real work.

Choose the right role for your demonstration

Open `http://localhost:3000`. Use an employee ID or username, then enter the password.

Demo accounts

All sample accounts use **verdant-demo**. These credentials are for a local demo only.

EMP-1042

Ananya / project owner

EMP-1071

Mira / responsible employee

EMP-1088

Vikram / assigned reviewer

VIS-1100

Leela / document-only visitor

DEMO-1201

Rohan / additional engineer

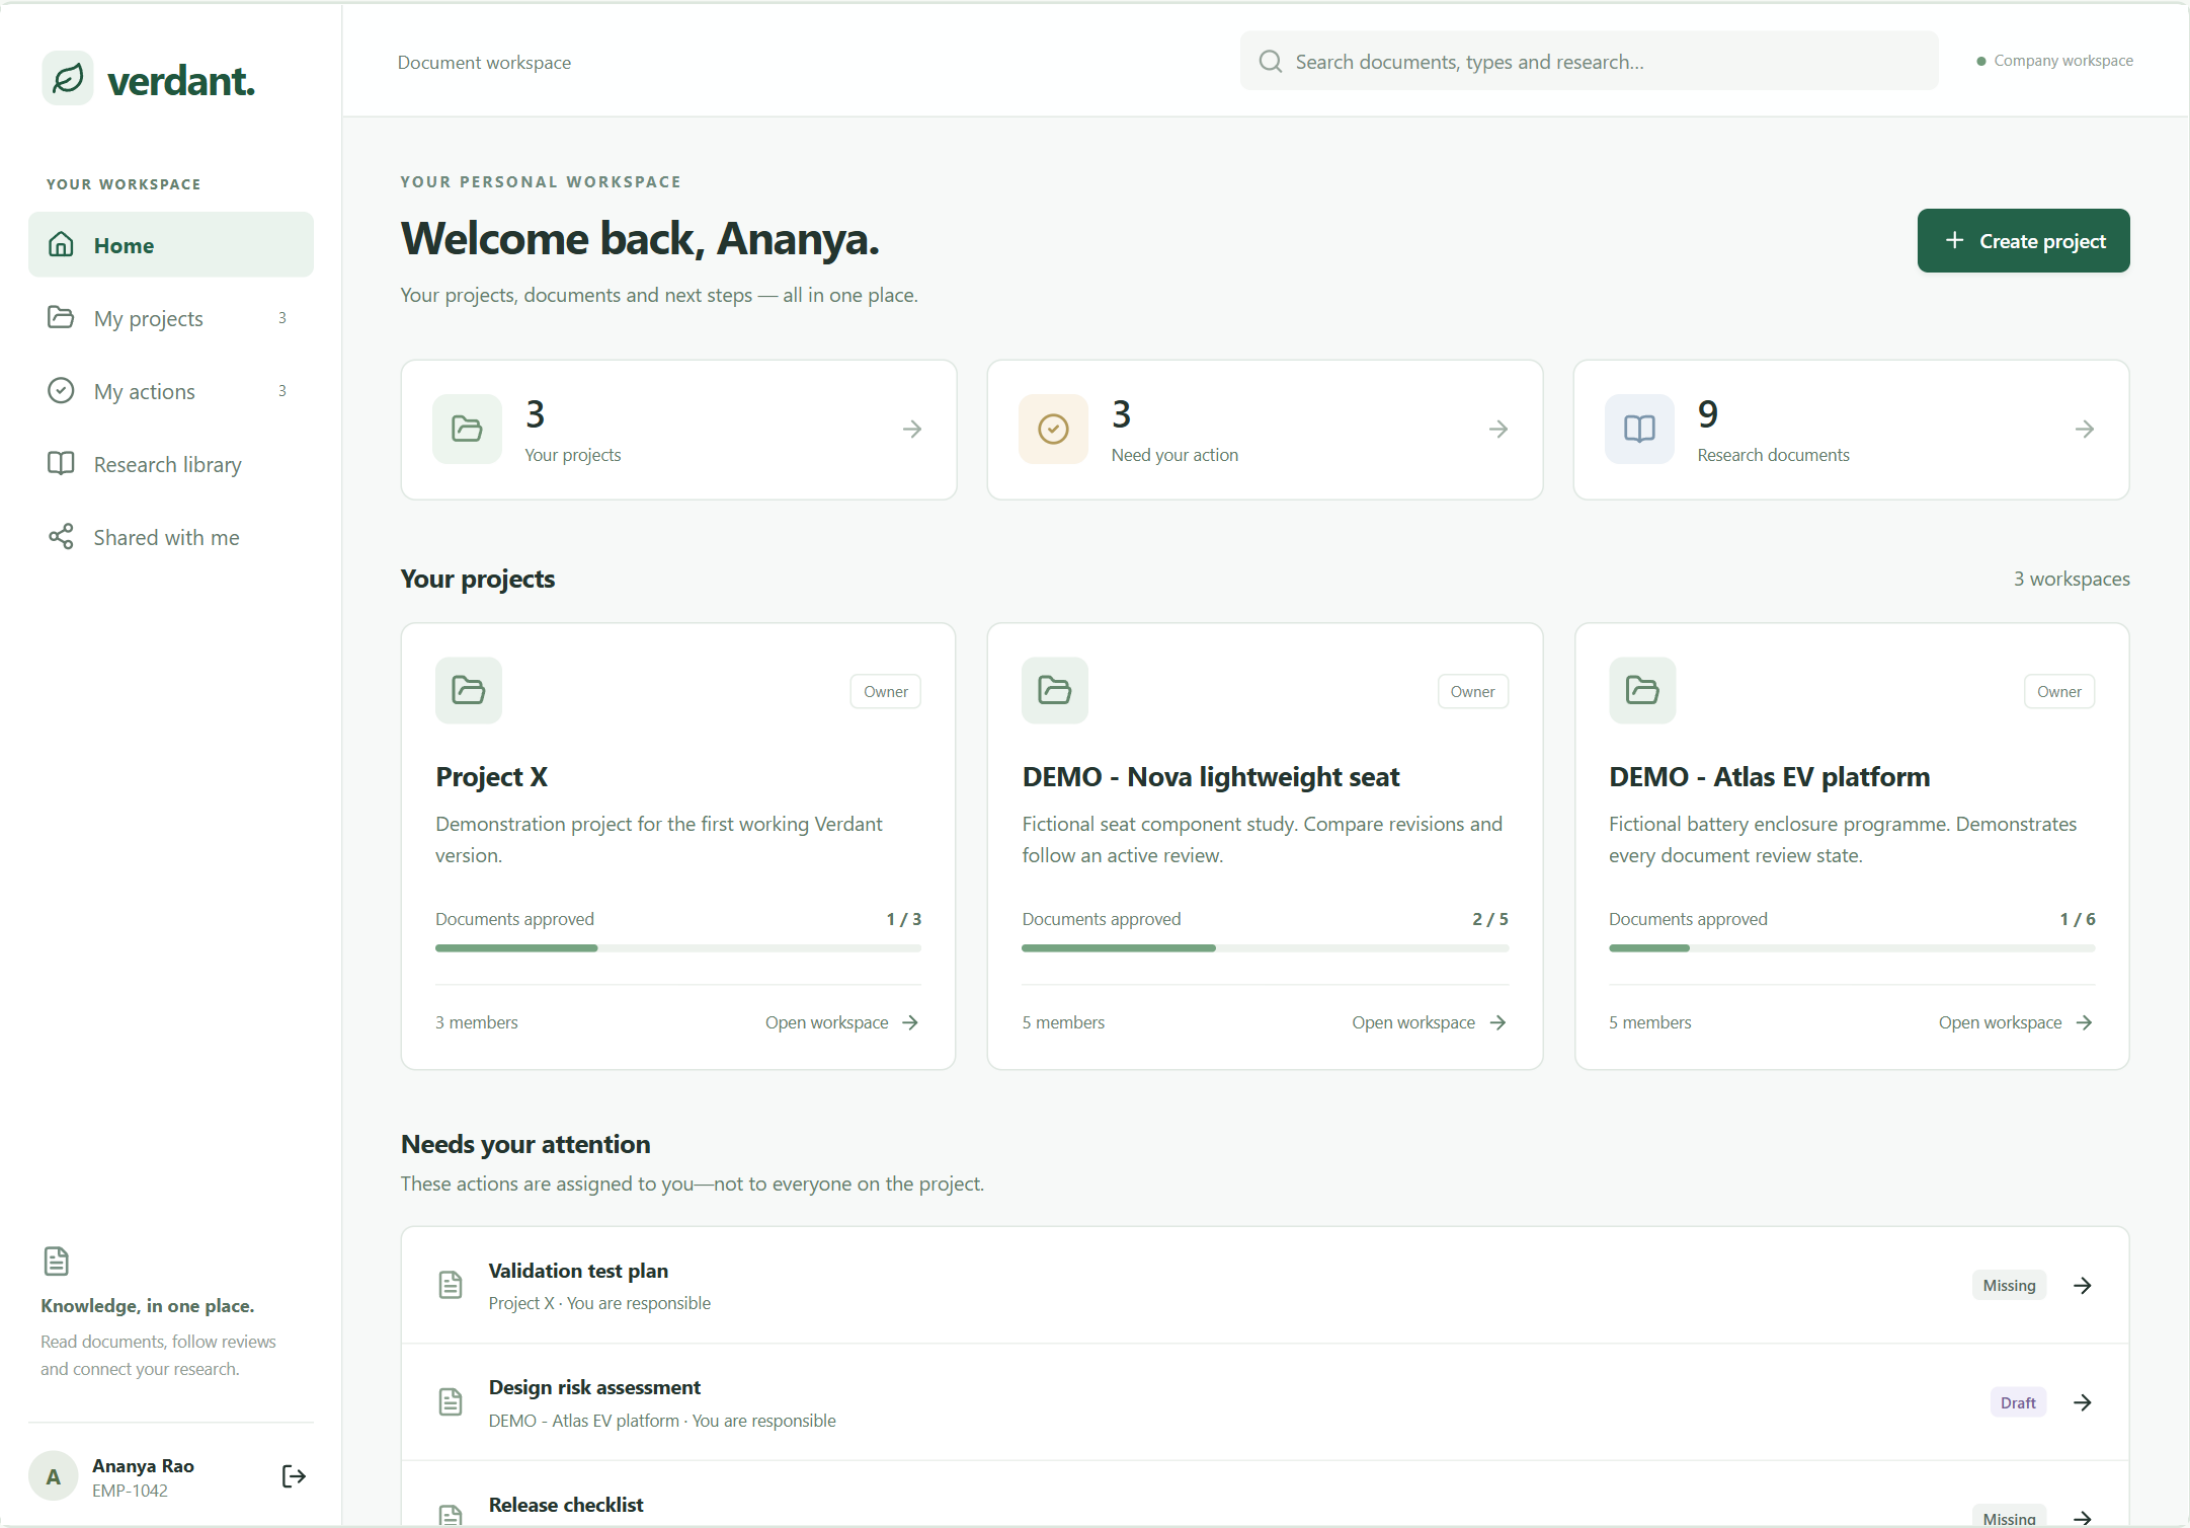

DEMO-1202

Sara / project observer

Sign out before changing roles. Use separate browser profiles or private windows for a live author/reviewer demonstration. Different tabs in the same browser profile share one session.

Start with your own workspace

Home is the landing page after login. My actions focuses on the work assigned specifically to you.

1 See your memberships

Project cards show only the projects you own or belong to. Select a card to open it.

2 Check your next action

Choose **My actions** or a row under **Needs your attention**. The matching document opens directly.

3 Use the workspace shortcuts

The summary cards lead to My projects, My actions and the shared research library.

The workspace refreshes about every 30 seconds while visible, except while a form or action is open.

Know exactly what is waiting for you

Choose My actions in the sidebar. The list is based on individual document assignments.

verdant.

KEEP EVERYTHING MOVING

My actions

Documents waiting for your upload, submission or review.

Needs your attention

These actions are assigned to you—not to everyone on the project.

Material specification

Project X · You are responsible

Changes Requested

Maintenance verification

DEMO - Lab methods refresh · You are responsible

Missing

Fatigue test method

DEMO - Nova lightweight seat · You are responsible

Draft

Battery enclosure drawing

DEMO - Atlas EV platform · You are responsible

Changes Requested

1

Missing or Draft

As the responsible employee, upload the first file or open an existing draft and submit it when ready.

2

Changes requested

Read the review feedback. Correct the file, upload a new version with a change summary, then submit it again.

3

Submitted or Under review

As the assigned reviewer, open the document, start review if needed, then approve or send written feedback.

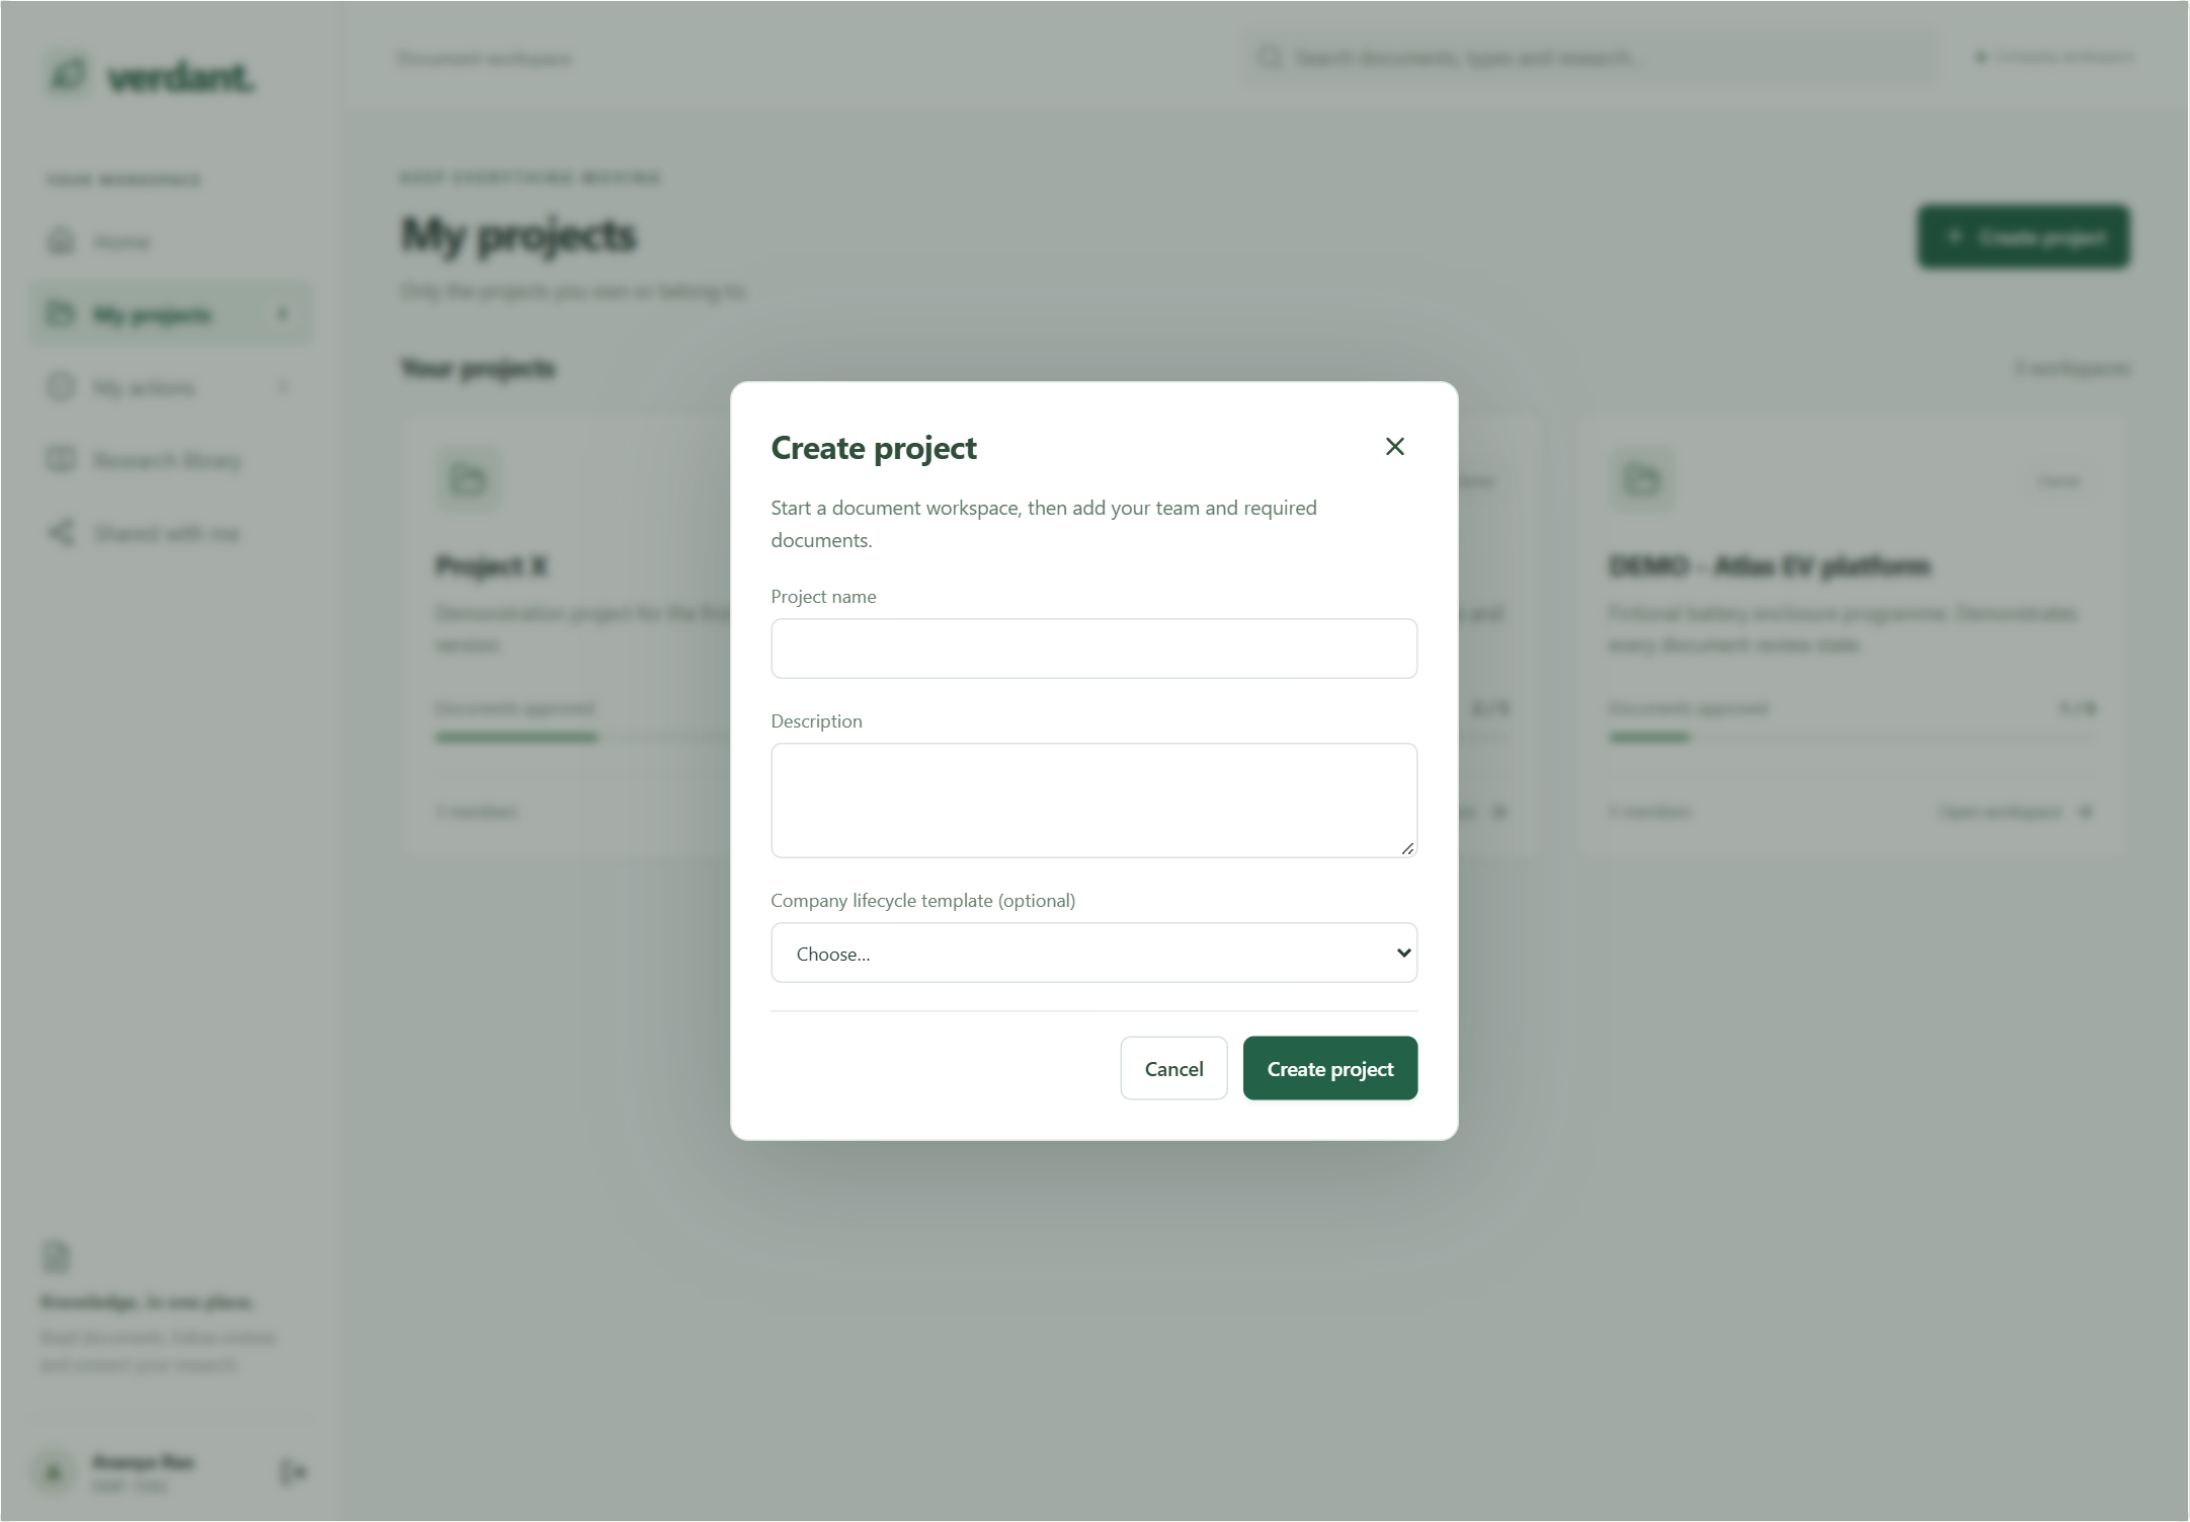

A viewer or observer may have no actions at all. A task leaves this list when it no longer needs that employee's action.

VERDANT / VISUAL USER GUIDE / SEPTEMBER 2026 / FICTIONAL DEMO DATA

04 / 20

Create a document workspace

Select My projects in the sidebar. Choose Create project to open the form shown here.

- 1

Name the project

Use a recognizable name and a short description. Example: **Project Y - pilot assembly**.
- 2

Choose a starting lifecycle

Select a company template if useful. Leave it blank to create your own stages later.
- 3

Create, then configure

Choose **Create project**. The creator is its owner. Next open **People & stages**.

A Verdant project organizes documentation. It is not a schedule, budget or project-planning board.

Build the team and lifecycle

Only the project owner can add members, stages and document requirements.

verdant.

Lifecycle stages

+ Add stage

1. Research & requirements

2 documents

2. Design

2 documents

3. Validation

1 documents

4. Release

1 documents

Each project can have its own stages. A stage groups required documents; it is not a project-planning task.

1 Add employees

Choose **Add member**, select an employee and save. Membership gives visibility into the project.

2 Add lifecycle stages

Choose **Add stage**. Use your project's real phases, such as Design, Validation and Release.

3 Assign work separately

Membership is not permission to upload every file. Each required document gets its own responsible employee and reviewer.

The owner may view and manage the project but cannot perform another employee's assigned upload or review.

VERDANT / VISUAL USER GUIDE / SEPTEMBER 2026 / FICTIONAL DEMO DATA

06 / 20

Define one document slot

Choose Required document from the project header. The example form is filled but not saved.

Description

Cancel

Save

1 Describe the required file

Enter a clear title and document type or part. Put different part drawings in separate document slots.

2 Choose stage and people

Select the lifecycle stage, responsible employee and one different reviewer. Both employees must belong to the project.

3 Save the requirement

Add an optional due date and description, then save. The slot starts as **Missing** until the first upload.

Use Change assignments on a document to update people. Assignments cannot change while its review is pending or underway.

Read without leaving the application

Choose Documents, then select a file in the stage-grouped list on the left.

Material selection report

DEMO - Atlas EV platform

Revision 2 | Page 1 of 2

NOT FOR ENGINEERING, PROCUREMENT OR SAFETY DECISIONS

1 Find the right document

Filter by title or lifecycle stage. Each row shows its current status, responsible employee and version.

2 Read in the main panel

PDFs open inside Verdant. Use previous/next page and zoom controls above the page. Images and content previews use the same panel.

3 Check the context

Read the responsible employee, reviewer, version note and feedback. A missing upload shows an empty reader.

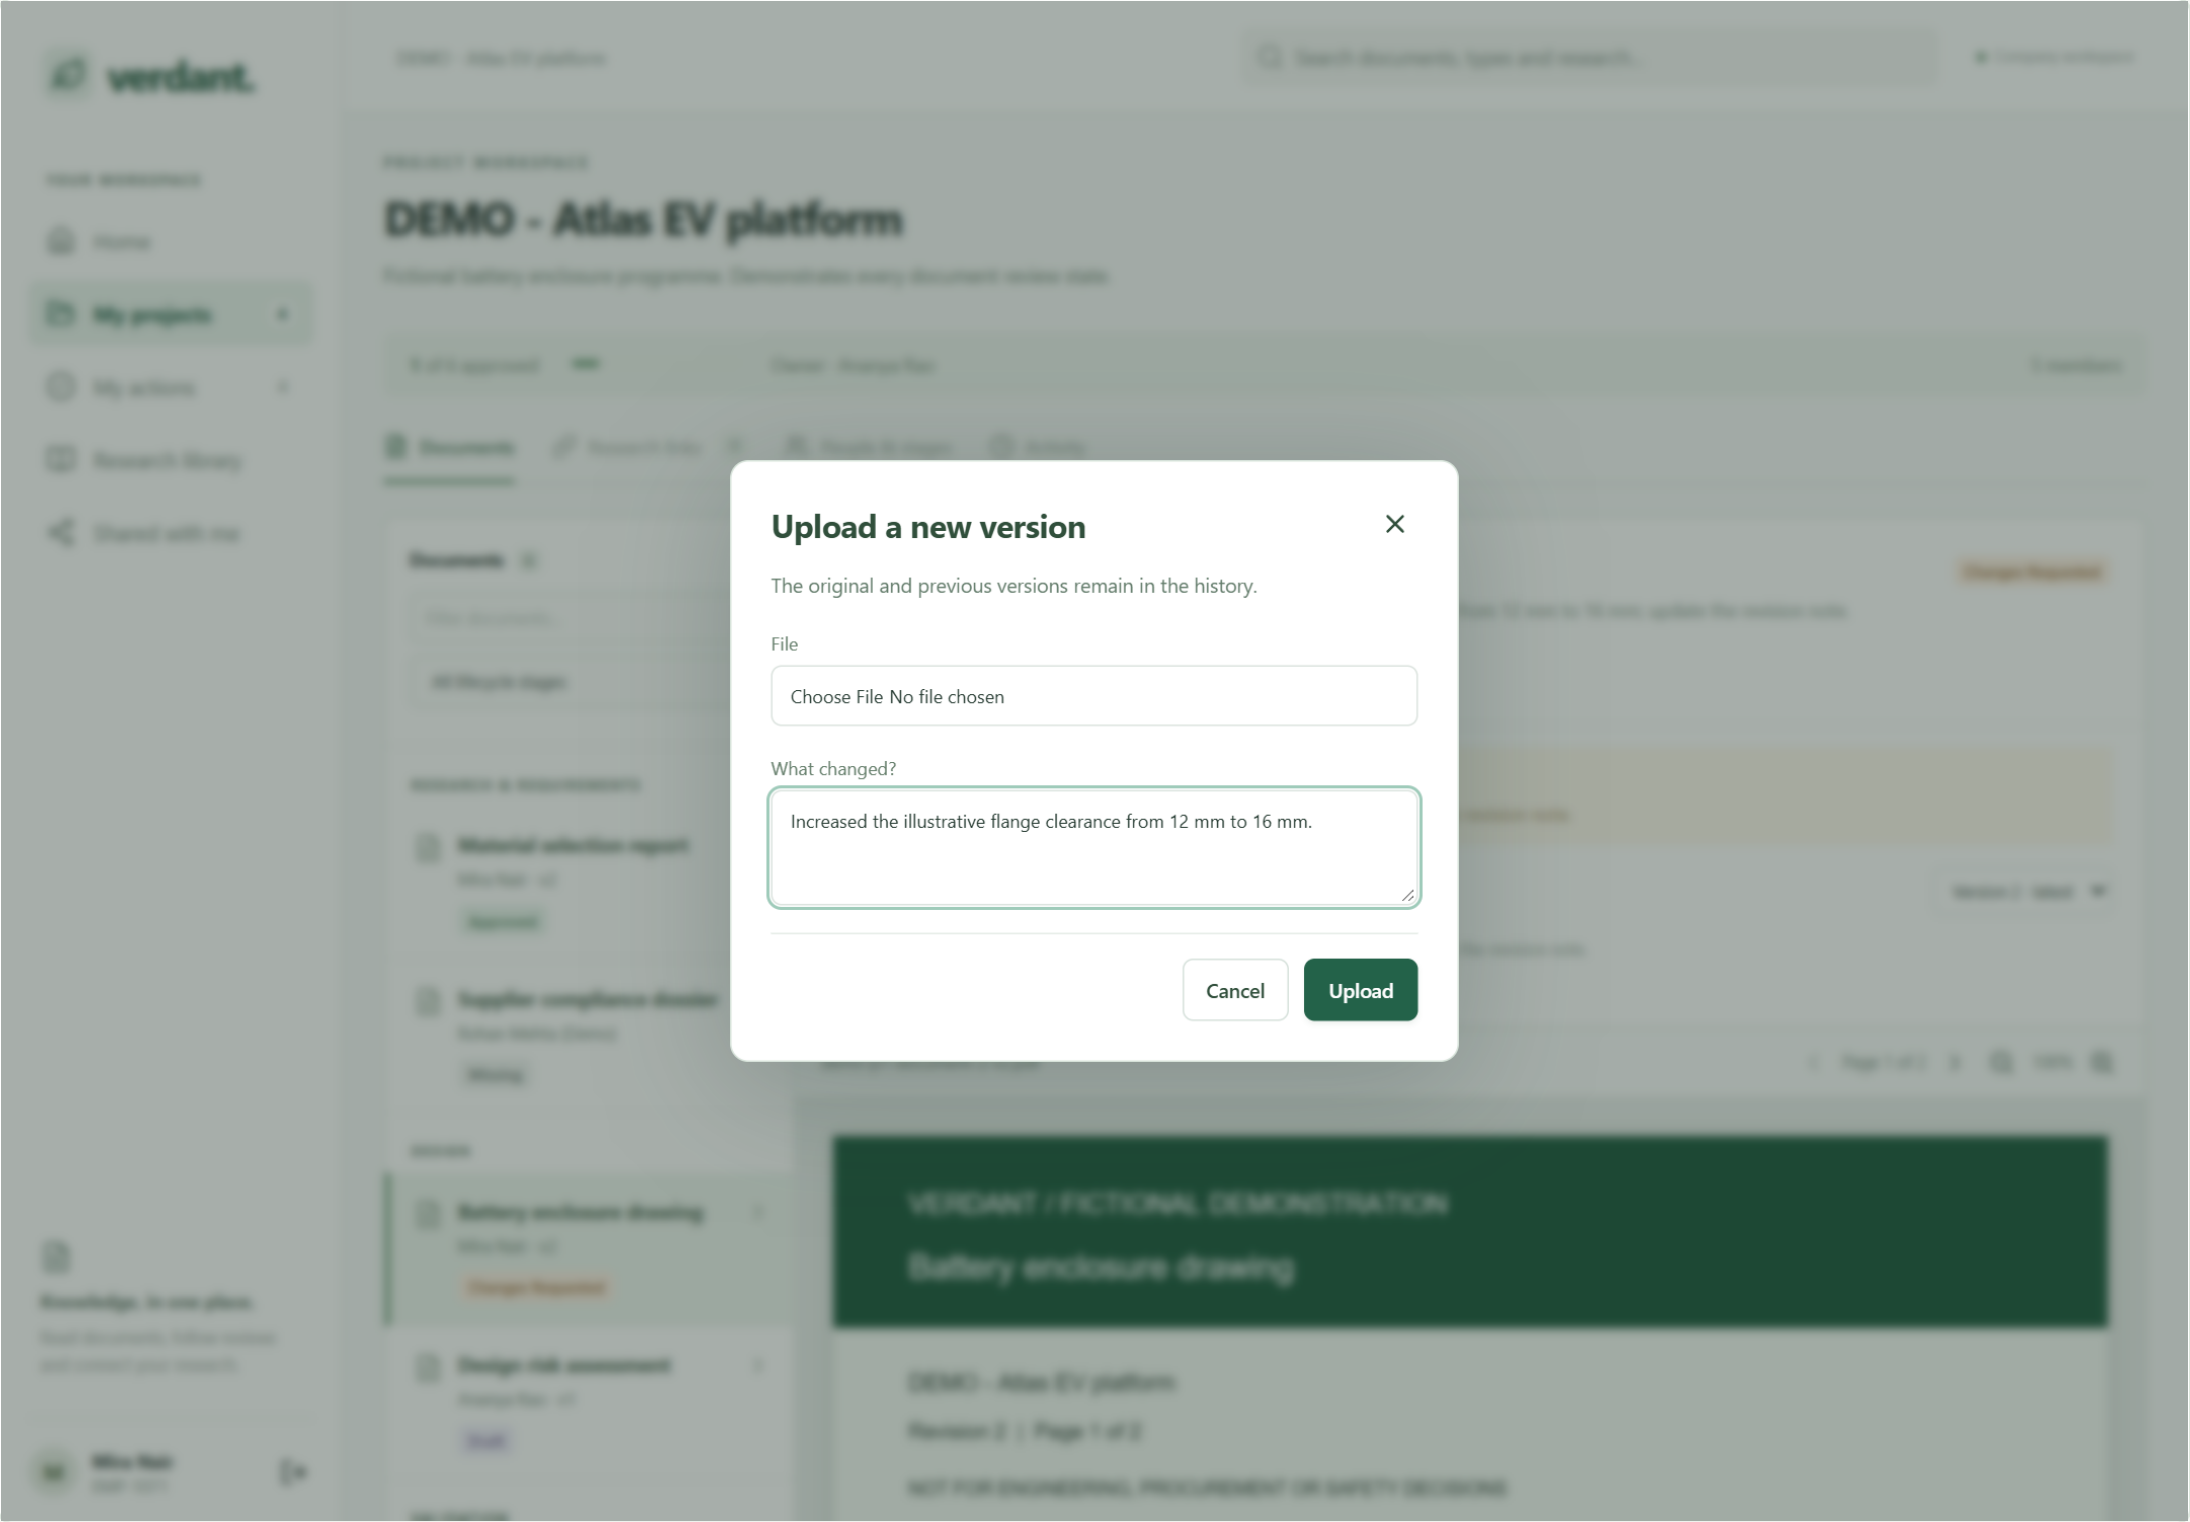

PDFs retain page layout. DOCX/PPTX show text; XLSX/CSV show tables. Export to PDF when exact Office formatting matters.

VERDANT / VISUAL USER GUIDE / SEPTEMBER 2026 / FICTIONAL DEMO DATA

08 / 20

Upload a version, then submit it

Example: Mira opens Atlas > Battery enclosure drawing, which has Changes requested.

1 Read the feedback first

Understand what the reviewer asked for. Update your file outside Verdant; the app stores and previews files, not an in-browser editor.

2 Upload the corrected file

Choose **Upload new version**, select the file, explain what changed, then choose **Upload**. Earlier files remain available.

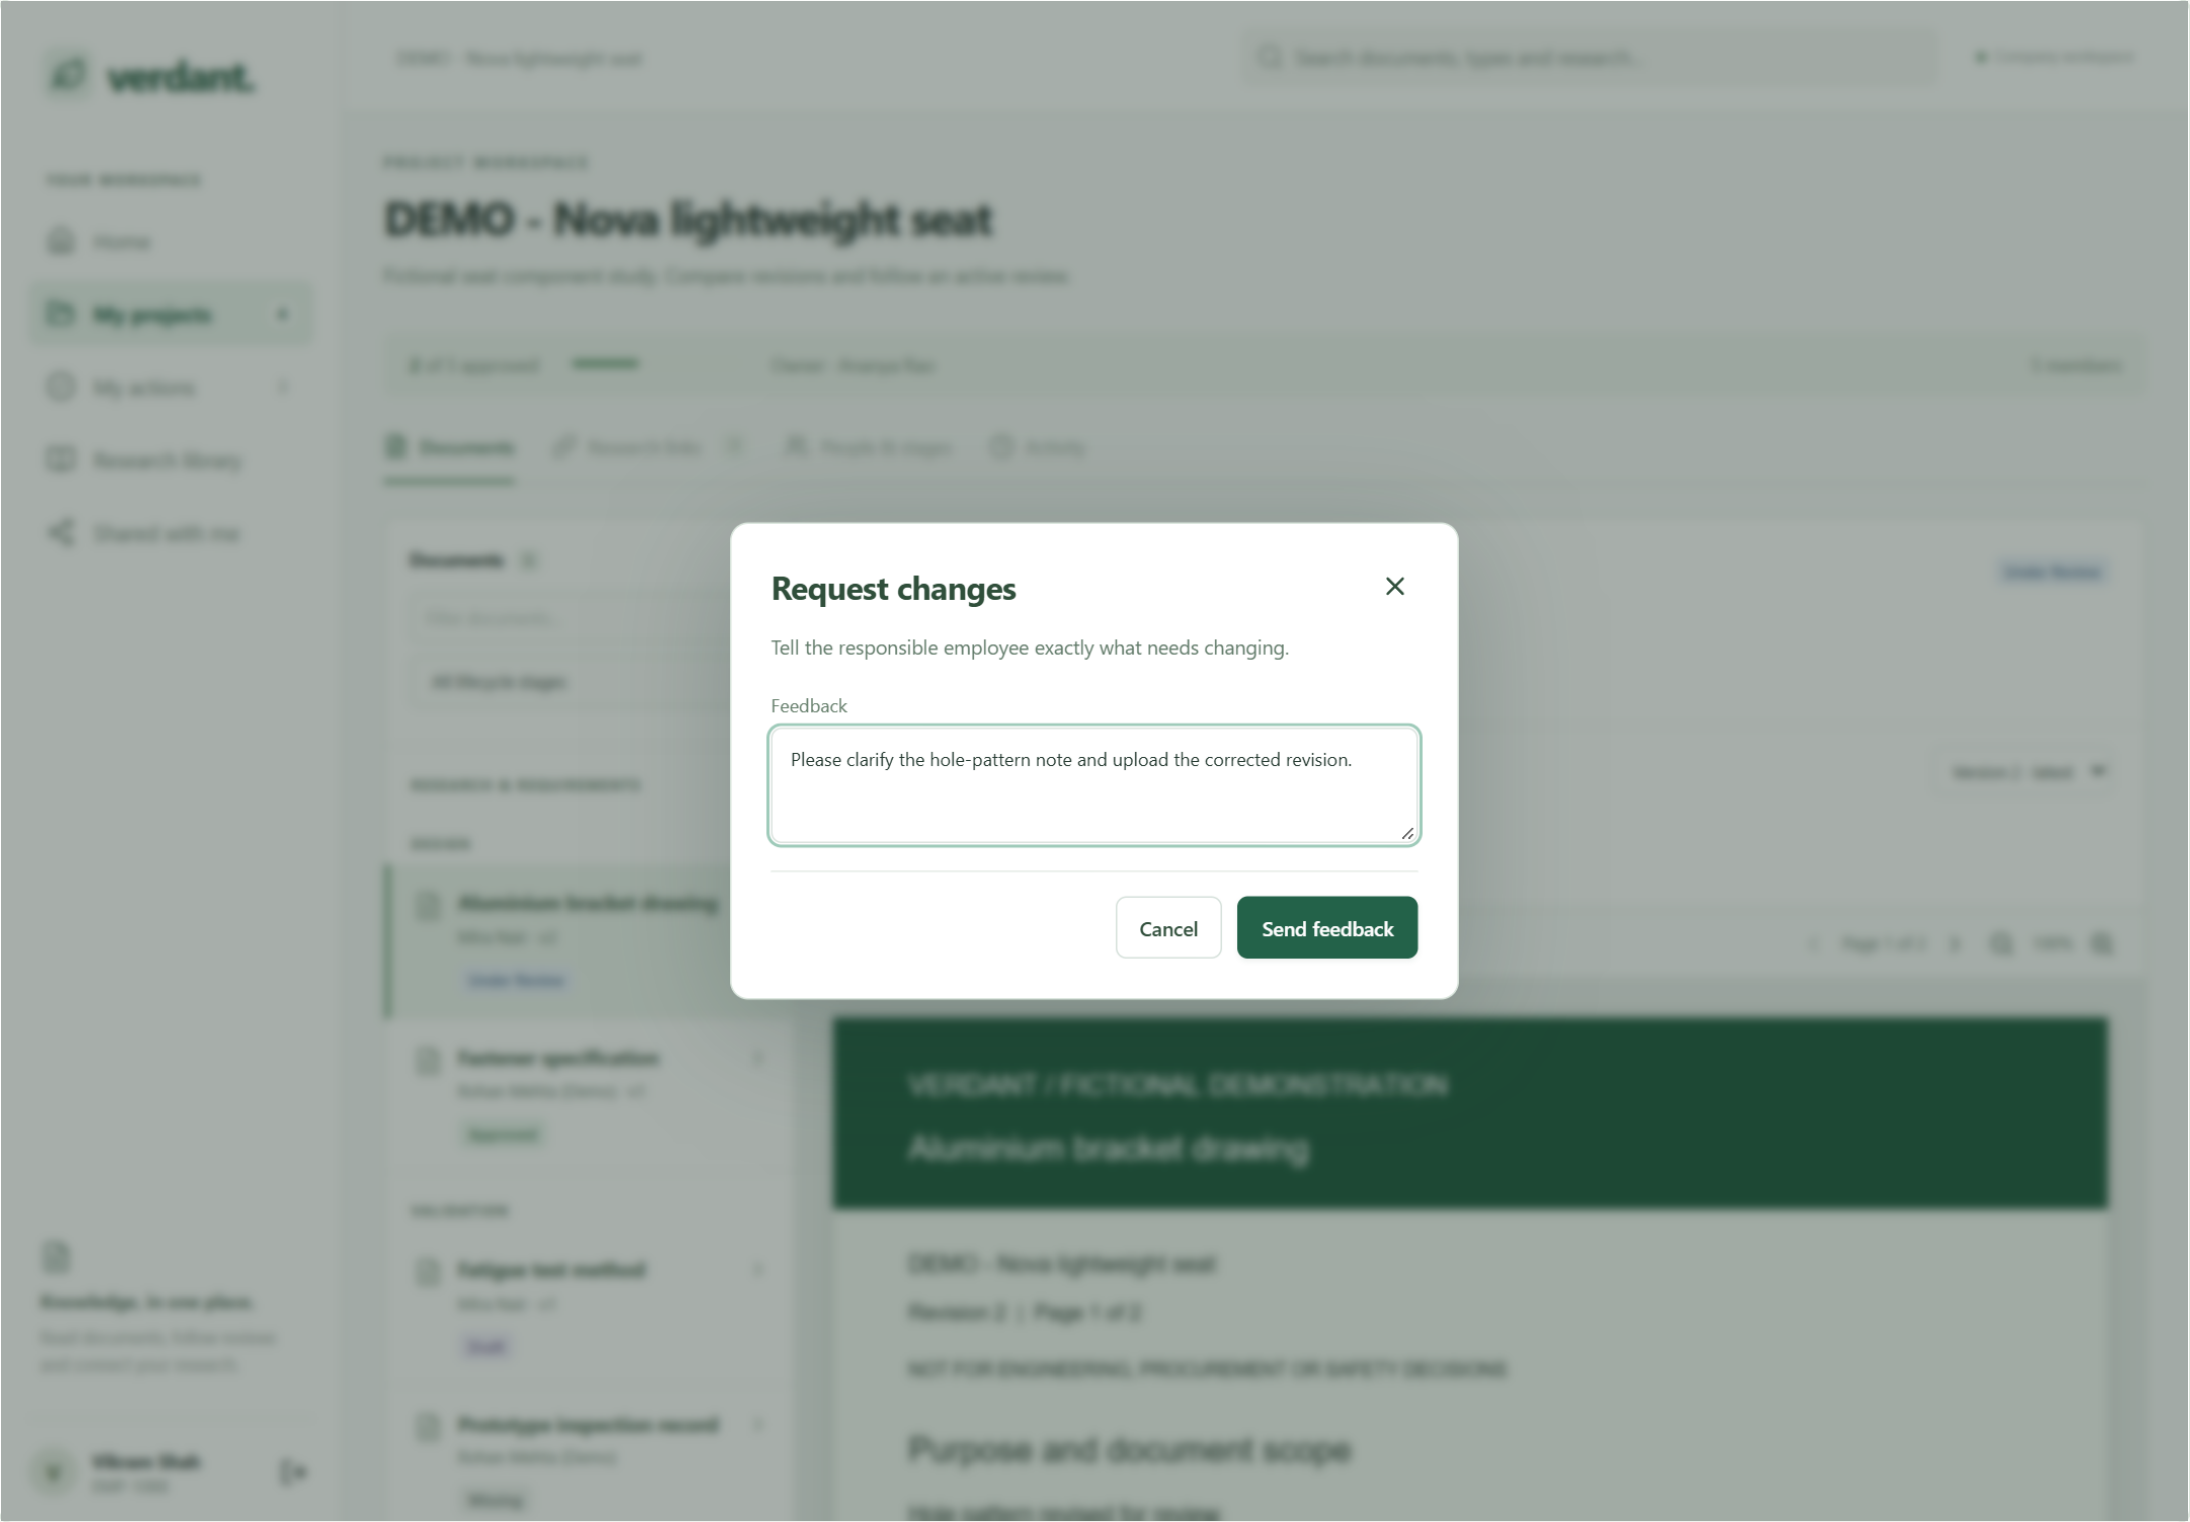

3 Submit the draft

The new version is a **Draft**. Read it, then choose **Submit for review**. It appears in the assigned reviewer's My actions.

Only the responsible employee can upload or submit. Uploads are blocked while a submitted version is awaiting review.

Make feedback clear and actionable

Start from My actions. On a Submitted document, select Start review before making a decision.

1 Inspect the latest file

Check its content and version note. Use comparison or history when earlier versions exist.

2 Approve or request changes

Approve records acceptance of this version. **Request changes** opens the feedback form shown here.

3 Explain the correction

Written feedback is required for changes requests. Choose **Send feedback**. The responsible employee then uploads a new version.

Owners and administrators cannot bypass the assigned reviewer. A research endorsement is different from a project review.

Keep the evidence, compare revisions

Older versions and their review comments stay attached to the same document.

verdant.

VERDANT / FICTIONAL DEMONSTRATION

Battery enclosure drawing

DEMO - Atlas EV platform

Revision 2 | Page 1 of 2

NOT FOR ENGINEERING, PROCUREMENT OR SAFETY DECISIONS

Purpose and document scope

Increase the illustrative flange clearance from 12 mm to 16 mm; update the revision note

Prepared by Mira Nair; assigned reviewer: Vikram Shah.

Fictional design parameter: clearance 12 mm.

Scope: controlled files, review decisions and retained versions.

Evidence and figures in this document are invented.

VERDANT / FICTIONAL DEMONSTRATION

Battery enclosure drawing

DEMO - Atlas EV platform

Revision 1 | Page 1 of 2

NOT FOR ENGINEERING, PROCUREMENT OR SAFETY DECISIONS

Purpose and document scope

Initial concept: review feedback is awaiting incorporation.

Prepared by Mira Nair; assigned reviewer: Vikram Shah.

Fictional design parameter: clearance 12 mm.

Scope: controlled files, review decisions and retained versions.

Evidence and figures in this document are invented.

1

Choose a version

Use the version selector above the reader. An earlier version shows its own feedback and a historical-version notice.

2

Compare side by side

Choose **Compare versions side by side**. The selected version and another retained version each have reading controls.

3

Return to the current file

Close comparison and select the latest version before submitting or reviewing. Historical selection hides current review actions.

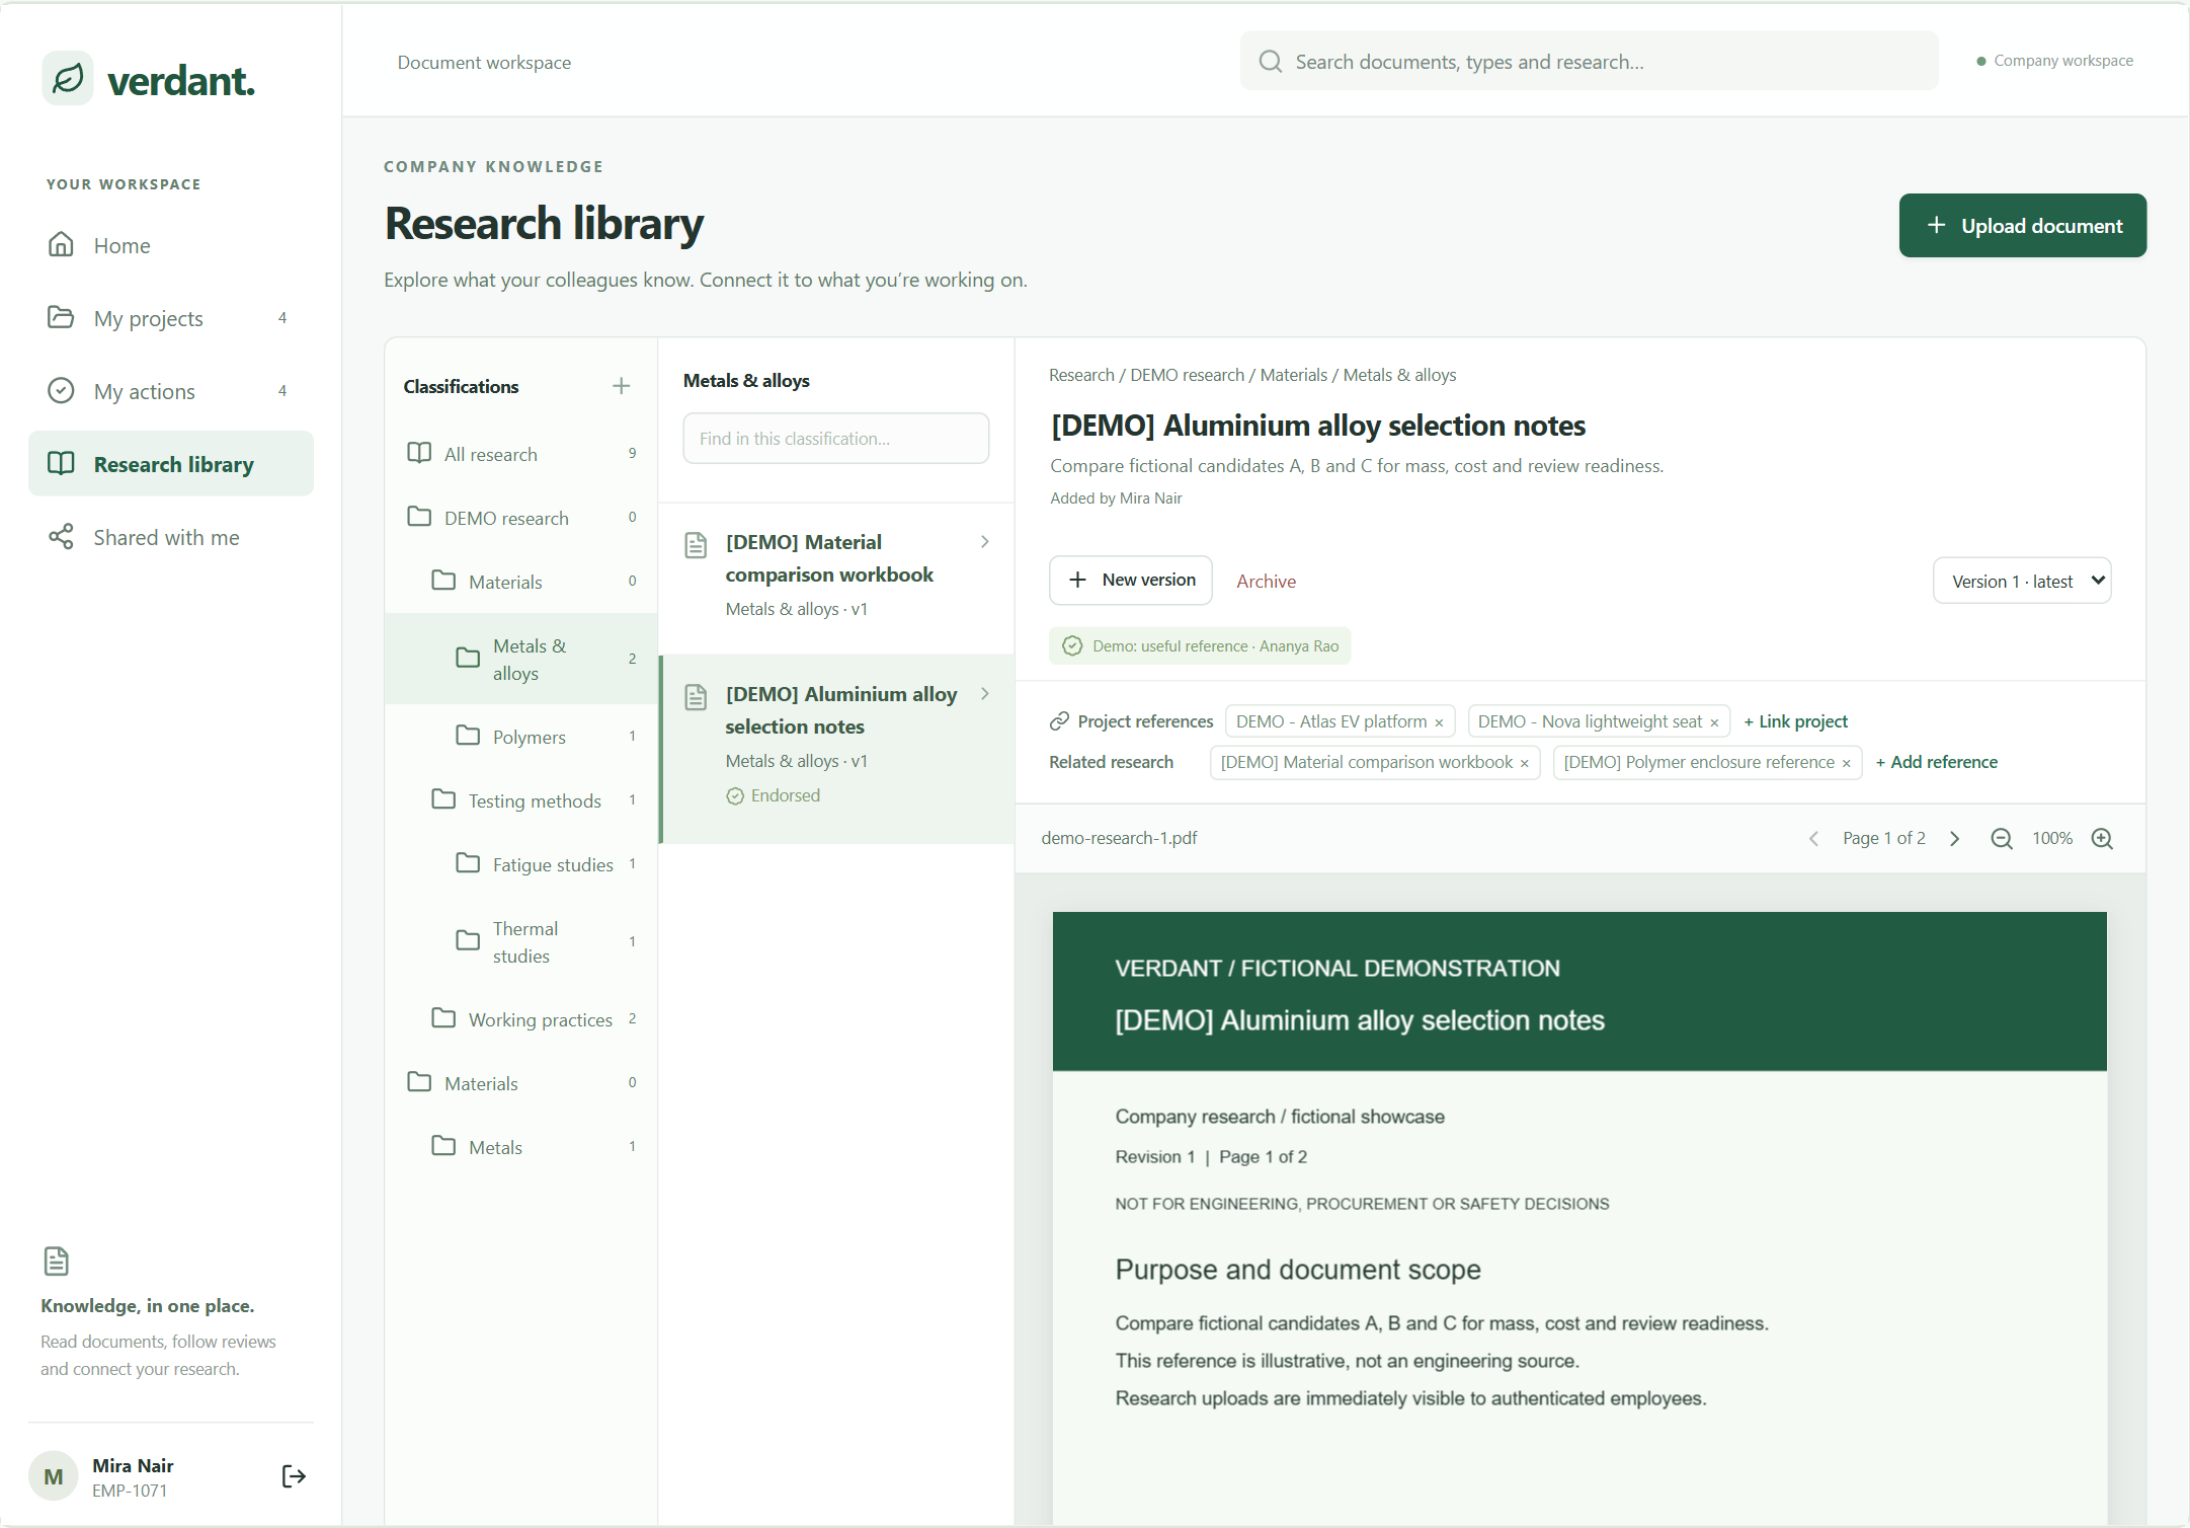

Comparison is visual; it does not automatically highlight edits or calculate a redline. Read the author's change summary too.

VERDANT / VISUAL USER GUIDE / SEPTEMBER 2026 / FICTIONAL DEMO DATA

11 / 20

Explore the company's knowledge

Research is a shared file library, not the controlled project review pipeline.

1 Browse classifications

Choose a folder on the far left. A parent includes documents from its subcategories. All research removes the category filter.

2 Switch between files

Select a title in the middle column. The reader and document details update on the right.

3 Look for useful context

Read the description, uploader, endorsement badges and references. An endorsement is a trust signal, not a publishing gate.

Use the classification's filter for a local search, or the top search bar to search across accessible project and research metadata.

Publish research and connect it

Any signed-in employee can contribute research files without submitting them for a project review.

[DEMO] Supplier handover notes

FICTIONAL DEMO - NOT FOR OPERATIONAL USE

A modern Word file demonstrating readable in-app content preview.

Record the source, version, owner and context.

Link the reference to a project instead of copying it.

1 **Classify and upload**

Use **+** beside Classifications to add a category or subcategory. Choose **Upload document**, enter a title and classification, then upload.

2 **Connect the reference**

+ Link project connects the file to an accessible project. **+ Add reference** connects related research documents.

3 **Keep one source**

Use **New version** for a revision of the same research document. Click a linked title to navigate. Do not duplicate a file just to reference it.

Senior approvers can Endorse research. Only authorized users can remove a link or archive a document; the server checks permission.

VERDANT / VISUAL USER GUIDE / SEPTEMBER 2026 / FICTIONAL DEMO DATA

13 / 20

See the research behind the project

Open a project's Research links tab to browse references used by that team.

[→]

1

Link an existing reference

Choose **Link research**, select a company research document and save.

2

Open the source

Select the linked document title. Verdant opens that document in the research library with its current version.

3

Return via its project link

In the research document, select the project reference to go back. Removing a link does not delete the research file.

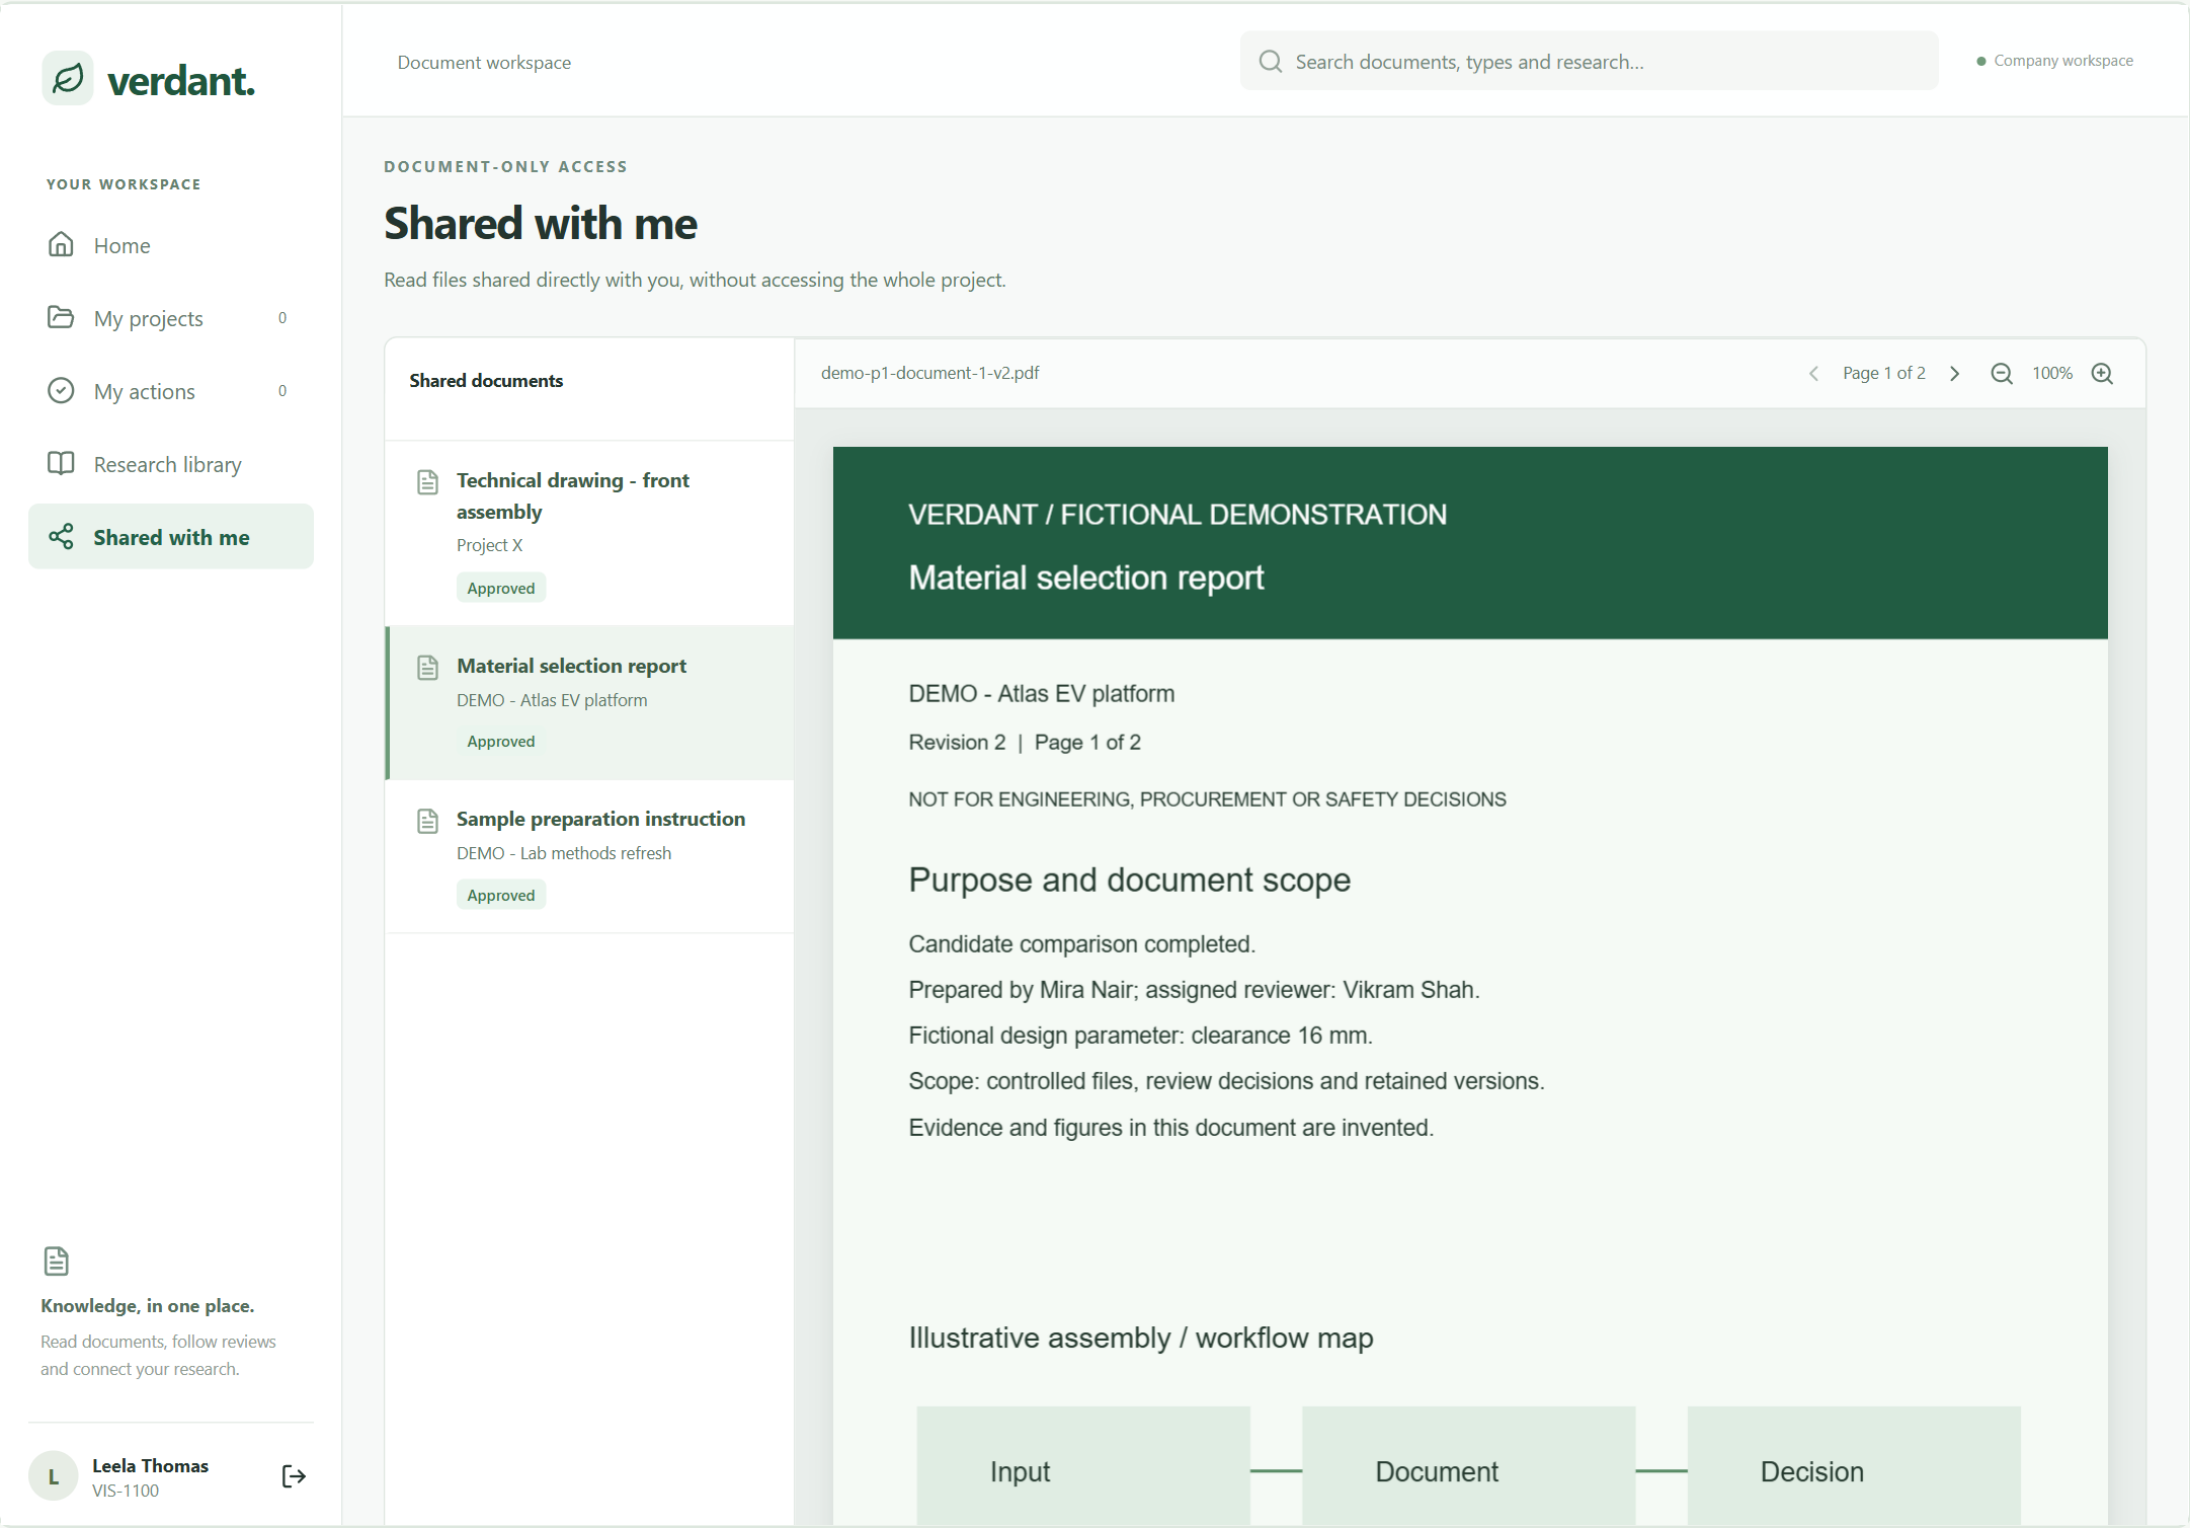

Project names are visible in the research library only to employees who can access those projects.

VERDANT / VISUAL USER GUIDE / SEPTEMBER 2026 / FICTIONAL DEMO DATA

14 / 20

Share a document, not the whole project

The screen shown is Leela's read-only visitor account.

1 Owner: share the file

Open the project document, choose **Share**, select an existing employee or visitor account and save.

2 Visitor: open Shared with me

Select the shared title in the sidebar's Shared with me area. Its latest version opens in the reader.

3 Keep access narrow

A document-only visitor does not gain access to the project dashboard, its other documents or its assigned work.

Sharing is to existing accounts, not a public anonymous URL. Only the project owner can manage document sharing.

Go straight to the document you need

The search bar stays available at the top of the workspace.

verdant.

Candidate comparison completed.

Document Review Started

Vikram Shah · 14/9/2026, 11:03:57 pm

Document Review Started

Vikram Shah · 14/9/2026, 10:43:57 pm

1 Read the timeline

Entries include the action, actor and time. Review decision entries include written comments.

2 Use it alongside history

Activity explains the sequence. The document's version selector opens the actual files and version-specific feedback.

3 Archive carefully

Owners can archive project requirements; research uploaders/admins can archive research. A confirmation explains that stored history remains.

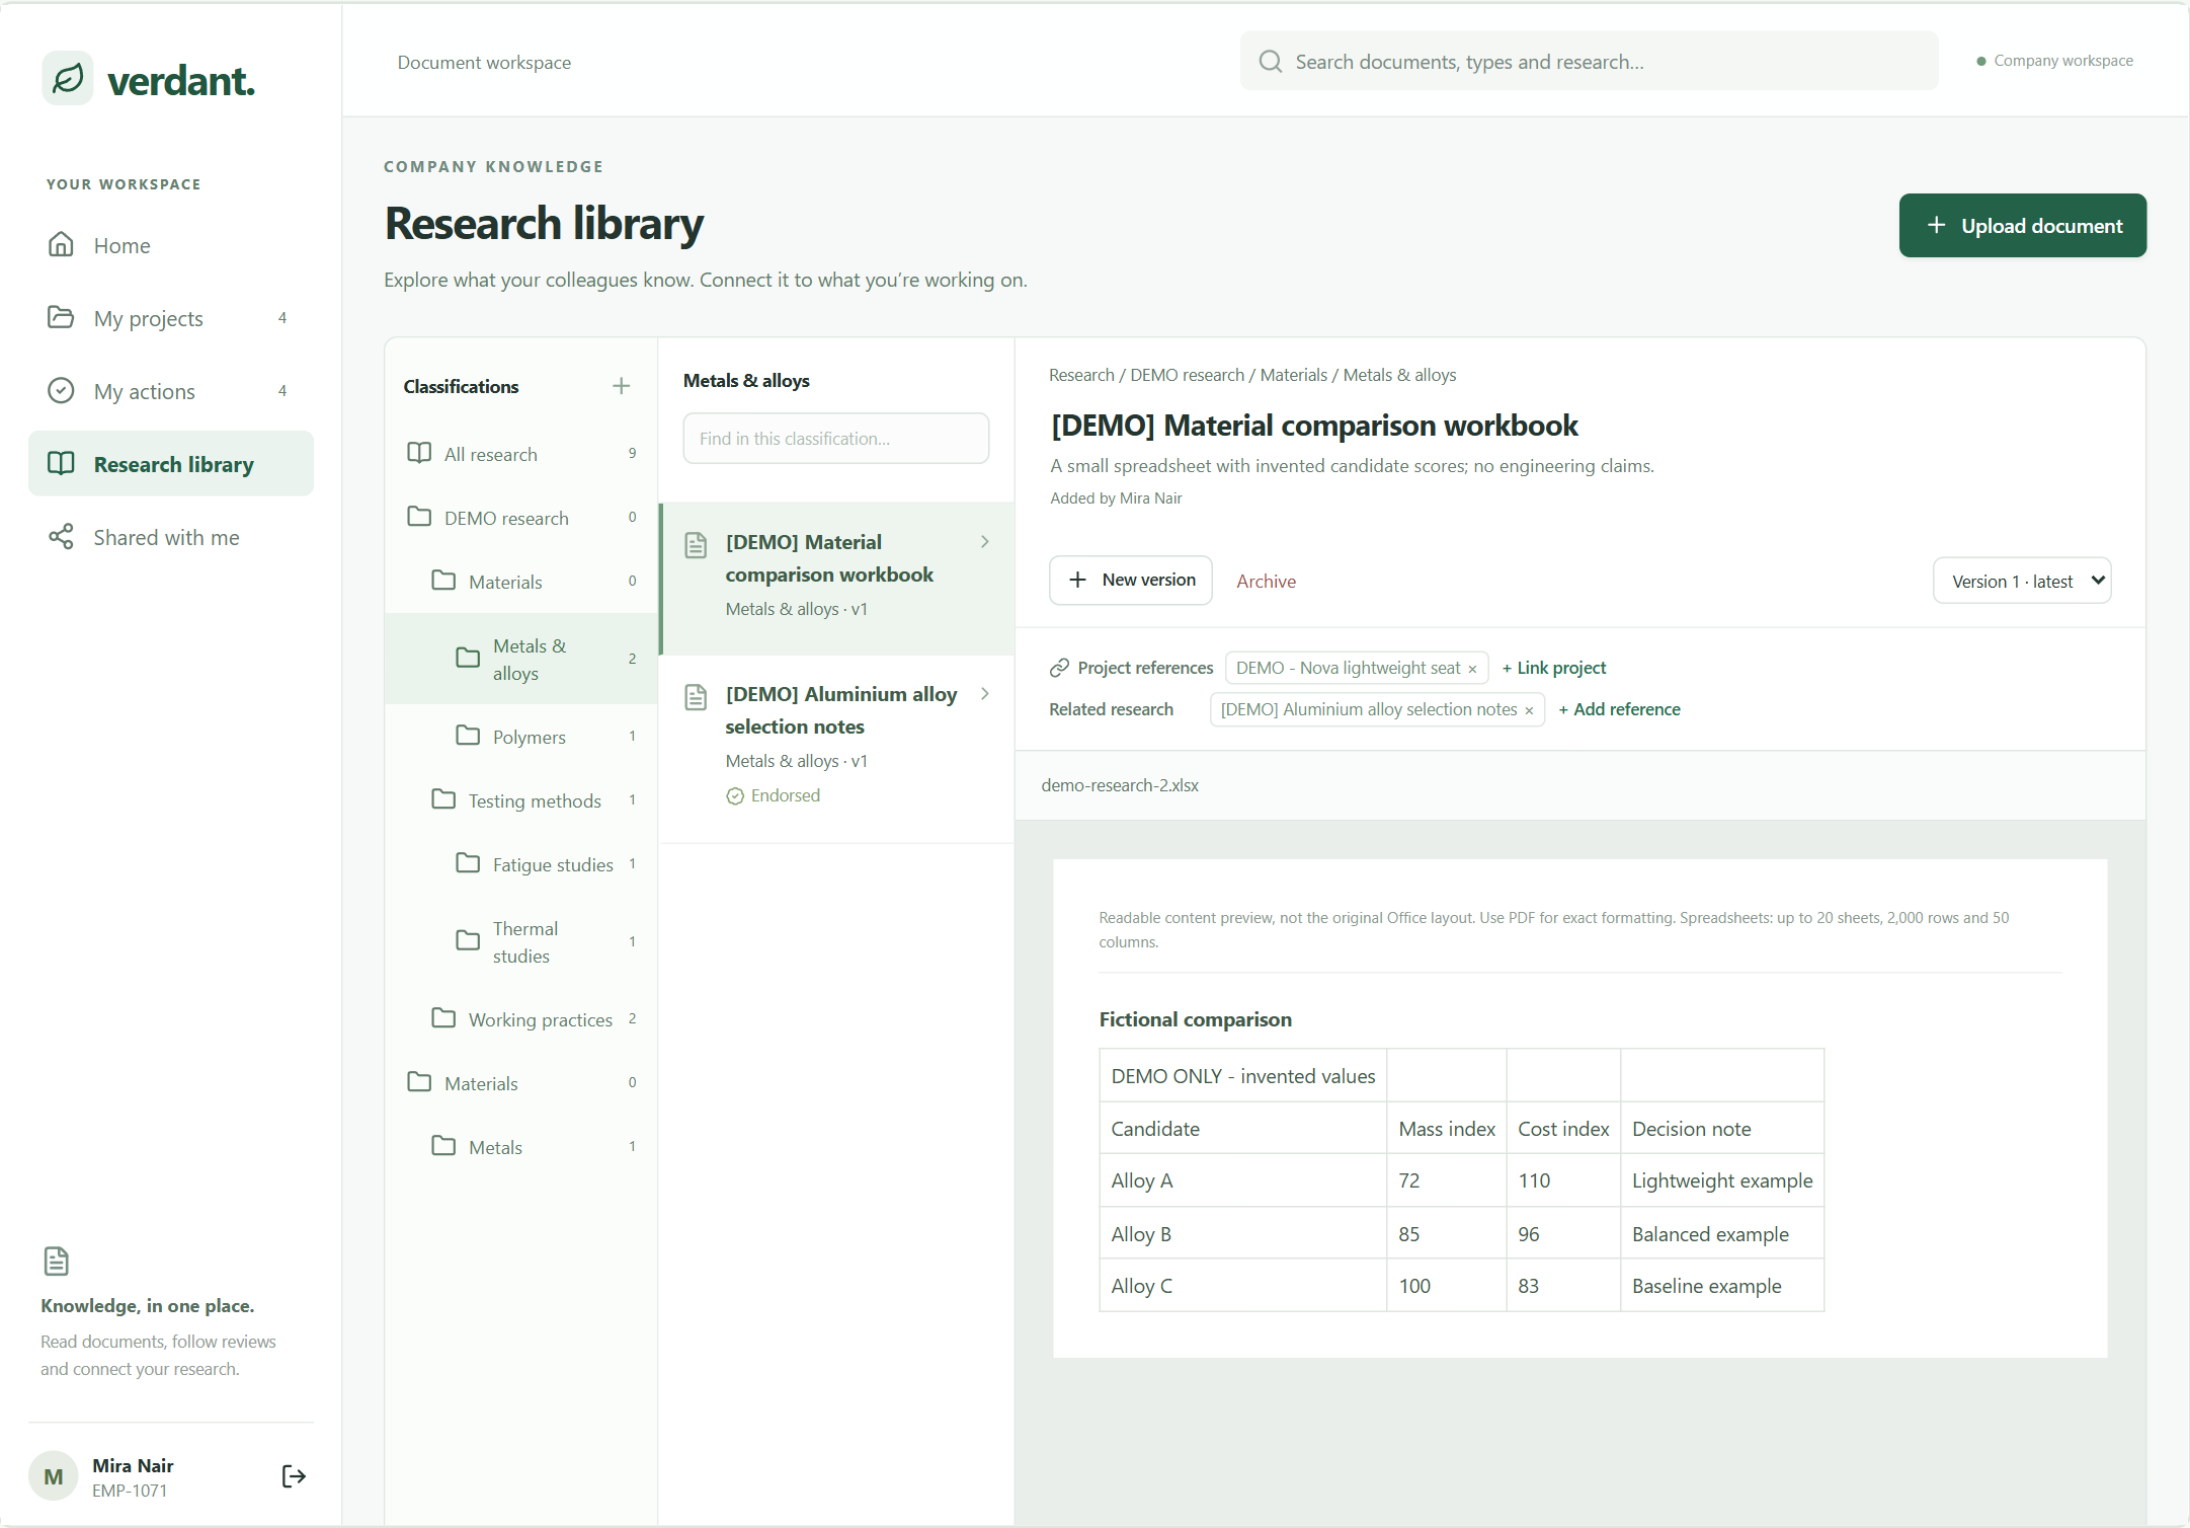

Archive hides a document; it is not a permanent file deletion. There is no self-service restore screen yet. The seeded history is fictional demo activity.

VERDANT / VISUAL USER GUIDE / SEPTEMBER 2026 / FICTIONAL DEMO DATA

17 / 20

View more than PDFs

Example: the fictional material comparison workbook opens as a table inside the research library.

1 Choose a supported file

PDF, PNG/JPEG/GIF/WebP, TXT/Markdown, CSV, DOCX, XLSX and PPTX can be viewed inside Verdant.

2 Read the preview note

Office previews show readable content, not original Office layout. Tables are bounded; the note states the row, column and sheet limits.

3 Use PDF for exact appearance

Export charts, complex formatting or legacy files to PDF before uploading when the precise layout is important.

Previewing does not edit the source file or execute spreadsheet formulas. To change content, edit it externally and upload a new version.

A useful 10-minute walkthrough

The showcase is already populated. These steps demonstrate real actions, not mocked screens.

1 / Owner - show the big picture EMP-1042 / 0-2 min	Home shows Project X, Atlas and Nova. Open Atlas, show its stages, document states and Research links.
2 / Author - respond to feedback EMP-1071 / 2-5 min	My actions > Battery enclosure drawing. Read the feedback. Upload demo-files/battery-enclosure-v3.pdf with a change summary, then Submit for review.
3 / Reviewer - close the loop EMP-1088 / 5-7 min	My actions > Battery enclosure drawing. Start review, inspect the new file and Compare versions. Approve with a short review note.
4 / Visitor - read safely VIS-1100 / 7-8 min	Shared with me > Material selection report. Read the multi-page PDF. No project management or upload actions are available.
5 / Research - connect knowledge EMP-1071 / 8-10 min	Browse DEMO research > Materials > Metals & alloys. Open the workbook, follow a related reference, and use a project link to return.

Use a separate browser profile for each role, or sign out between accounts. Rerunning Add-DemoData.ps1 does not reset this walkthrough after you complete it. For a clean rehearsal use a separate fresh demo database.

Keep the demo ready to run

The product branch is product-architecture-postgresql. Docker is not required.

First installation

Install Git, Python 3.12+, Node.js 22.13+ and PostgreSQL 16+. Clone the branch and run these commands from the project folder:

```
powershell -ExecutionPolicy Bypass
-File .\Install-Verdant.ps1 -DemoData

powershell -ExecutionPolicy Bypass -File .\Start-Verdant.ps1
```

Existing demo installation

Update the code and dependencies, then run **Add-DemoData.ps1**. It applies migrations and adds the showcase once. It does not replace employee passwords, existing documents or demo progress.

Open **http://localhost:3000**.
Use **Stop-Verdant.ps1** to stop the app and **Start-Verdant.ps1** after restarting Windows.

If something is not available

No upload/review button	Check the named responsible employee or reviewer; ownership alone does not grant that action.
A new upload is blocked	Wait for the current submitted/active review to finish. After changes are requested, upload a new version.
Office layout looks different	Office files show readable content. Use PDF for exact formatting; CAD/legacy/unsafe formats need conversion.
A project or link is missing	Ask its owner for membership or a document-only share. Company research visibility does not grant project access.
Sign-in or setup fails	Confirm PostgreSQL and both app services are running. Follow LOCAL-RUN.md and docs/LOCAL_INSTALLATION_WINDOWS.md.

Use only fictional data in demos. Before company deployment, replace demo credentials and arrange HTTPS, backups, restricted database access and a security review.
